TECHNICAL BULLETIN

Lotus Floral Wax

Chemical Name: Nelumbo Nucifera Wax

SPECIFICATIONS:

Specific Gravity	0.89 @ 20°C
Solubility	Soluble in Ethanol
Odor	Fresh, Fruity, Fatty, Nutty
Color/Form	Dark yellow, solid wax

DEFINITION:

Lotus wax is produced by alcohol (solvent) extraction from Lotus absolute.

Floral wax is the solid, fragrant, creamy wax derived from flower petals. Carefully selected flower heads are placed in solvent to first obtain the concrete and absolute. The concrete is then washed with alcohol to extract the absolute from the botanical material leaving behind the natural solid plant waxes. These waxes hold many of the benefits of the botanical including the moisturizing phospholipids.

Floral wax makes a divine, exotic addition to creams, balms and lotions, and it lends thickness and a beautiful aroma. Recommended usage is up to 10%.

STORAGE: To be stored in a cool place, in tightly closed containers preferably full, protect from light, when stored for more than 18 months, quality should be checked before use.

CAUTION: Concentrated product for industrial use. Avoid contact with eyes and mucous. Not for consumption.
